## Uniform Circular Motion Homework Review

AP Physics 1 December 3, 2014  (I) A child sitting 1.10 m from the center of a merry-goround moves with a speed of 1.25 m/s. Calculate (a) the centripetal acceleration of the child, and (b) the net hori-

$$r = 1.10 \text{ m}$$

$$v = 1.25 \text{ m/s}$$

$$a = \frac{\sqrt{2}}{r} = \frac{(1.25)^2}{1.10} = 1.42 \text{ m/s}^2$$

$$a = \frac{m/s^2}{a} = 1.42 \text{ m/s}^2$$

2. (I) A jet plane traveling 1890 km/h (525 m/s) pulls out of a dive by moving in an arc of radius 6.00 km. What is the plane's acceleration in g's?

$$V = 525 \, \text{m/s}$$

a=\_\_m/s² (in g's, so we will have to divide by 9.8 m/s²)

3. (I) Calculate the centripetal acceleration of the Earth in its orbit around the Sun, and the net force exerted on the Earth. What exerts this force on the Earth? Assume that the Earth's orbit is a circle of radius 1.50 × 10<sup>11</sup> m. [Hint: see the Tables inside the front cover of this book.]

$$T = 365 \text{ days} * \text{convert} *$$

A car moving at 12.67 m/s rounds a bend in the road. The bend is semicircular and has a radius of 60.0 m. What is the centripetal acceleration of the car?

$$V = |2.67 \text{ m/s} \qquad a = V^2 = \frac{(12.67)^2}{60.0} = 2.675$$

$$C = \frac{m/s^2}{a} = \frac{(12.67)^2}{60.0} = 2.68 \text{ m/s}^2$$

A town has a large clock on the hall in the town square. The clock has hands that show the hours, minutes, and seconds. A fly is sitting on the tip of the hand that shows the seconds. If the length of the hand is 1.20 m, what is the fly's centripetal acceleration?

A rock is tied to a string and spun in a horizontal circle. The string is 1.8 m long and the rock has an acceleration of 3.4 m/s<sup>2</sup>. What is the tangential velocity of the rock?

$$r=1.8 \text{ m}$$
 $a = 3.4 \text{ m/s}^2$ 
 $V = m/s$ 
 $v = \sqrt{\alpha r} = \sqrt{3.4 \cdot (1.8)} = 2.4738$ 
 $v = 2.5 \text{ m/s}$
