

Length of pendulum $\pm 0.05$ m	Time for 20 oscillations $\pm 0.2$ s	Period $T$ (s)
0.21	18.1	.905   .91
0.40	25.5	1.275   1.28
0.62	31.5	1.575   1.58
0.80	36.8	1.84   1.84
1.00	40.4	2.02   2.02

(y) $T^2$ ( $s^2$ )	Absolute error of $T^2$
.8281   .83	.0183   .02
1.6384   1.64	.0257   .03
2.4964   2.50	.0317   .03
3.3856   3.39	.0368   .04
4.0804   4.08	.0408   .04

$$\% \text{ error of } T^2 = \left( \frac{\text{uncert. of time for 20 oscillations}}{\text{time for 20 oscillation}} \right) * 100$$

$$\text{Ex. } \% \text{ error } T_1^2 = \left( \frac{0.2 \text{ s}}{18.1} \right) * 2 * 100$$

$$= 2.21\% * .83 = 0.0183 = \text{error for } T_1^2$$

$$\text{Period} = \frac{\text{Time for 20 oscillation}}{20}$$

Ex.

$$T_1 = \frac{18.1 \text{ s}}{20} = .905 \text{ s} = .91 \text{ s}$$

$$T^2 = (\text{Period})^2$$

$$\text{Ex. } T_1^2 = (.91 \text{ s})^2 = .8281 \text{ s}^2 = .83 \text{ s}^2$$

abs.

$$= 0.0183 = \text{error for } T_1^2$$

$$T^2 = \left( 2\pi \sqrt{\frac{l}{g}} \right)^2$$

$$T^2 = 4\pi^2 \frac{l}{g} = \frac{4\pi^2}{g} l + 0$$

$y = mx + b$ 
  
 $\downarrow$        $\downarrow$        $\downarrow$ 
  
 $m$        $x$        $b$

## T<sup>2</sup> vs. l

$$\text{Slope} = 4.1641 \text{ s}^2 \text{ m}^{-1}$$

$$\text{Slope} = 4\pi^2/g$$

$$\text{Therefore } g = 4\pi^2/\text{Slope}$$

$$g = 4\pi^2/4.1641$$

$$g = 9.48 \text{ m s}^{-2}$$
